TECHNICAL DATA FOR THE INSURANCE INDUSTRY

It Pays to Think **RESTORATION FIRST**

Just because electronic equipment is damaged in a loss, it doesn't always need to be replaced.

In fact, research shows that the majority of smoke and water damaged equipment can be restored to a pre-loss condition.

New isn't always better. Especially if you consider that restoration will...

- **Save you time** –

Cleaning equipment is generally a much faster process than purchasing new, so it may allow you to close files more quickly.

BEFORE

AFTER

- **Contain costs** – As a

rule, restoring equipment is more cost-effective than replacing it, so exploring it allows you to make more informed decisions.

- **Save your insureds time** – What's easier than plug-and-play with existing equipment? No unforeseen compatibility issues, no training requirements!

Are the losses on your desk right now candidates for restoration? [Contact us now](#) for a fast, free evaluation!

Upon arriving to work on a Monday morning, teachers at a local high school discovered that vandals had broken into a science lab and activated an eye wash station which caused water to overflow and contaminate computers, servers and printers in two computer labs on the floor below. Damages were estimated to be approximately \$300,000.00.

TechLoss Consulting & Restoration, Inc.'s team of engineers and technicians traveled to the school, stabilized the equipment and determined that the computers, servers and printers could be restored and returned to a pre-loss condition. The cleaning was performed at the site at a cost of \$83,000.00.

Make TECHLOSS Your Restoration Expert

It takes a professional to clean and restore electronic equipment correctly. At TechLoss Consulting & Restoration, Inc., our trained engineers can handle any size project, on-site or in our in-house facility. No matter what the equipment is, chances are, we've cleaned it, restored it, and helped its owner get back to work fast.
